Kaal — Where the work went

Effort distribution across the codebase · generated June 26, 2026 · proxy = lines of hand-written code

45,966	165	10	13,005
hand-written Dart LOC	Dart source files	feature areas	generated (ORM) LOC*

Code by architectural area

How the 45,966 hand-written lines split across the app's layers.

Feature screens	**76.4%**	35,141
Shared UI widgets	**8.5%**	3,914
Integrations & services	**4.9%**	2,267
Data & persistence	**4.7%**	2,152
Routing & navigation	**2.0%**	909
Localization (19 langs)	**0.9%**	421
Design system / theme	**0.8%**	375
App state & settings	**0.7%**	313
Config / util / entry	**1.0%**	474

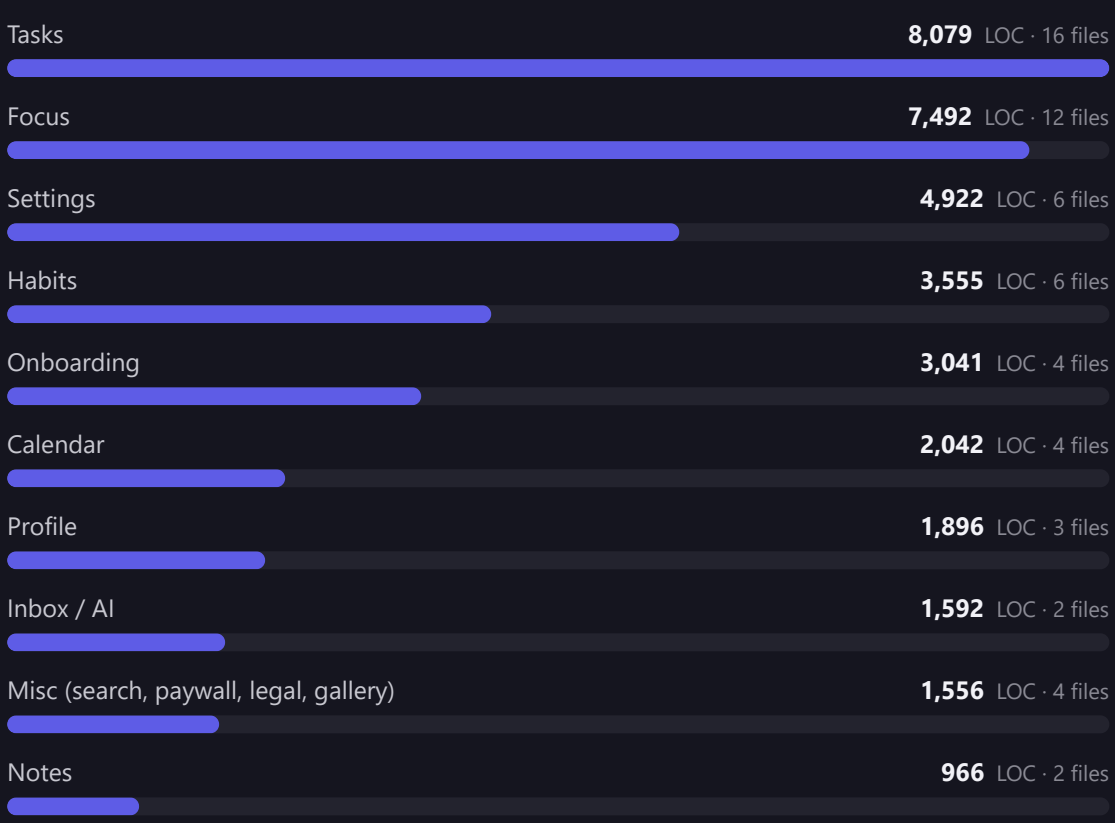

Where did the work go? — by character of work

Higher-level grouping. UI/feature building dominates; the rest is backend, design-system and infra.

Building features (screens + widgets)	**39,055**	LOC · #0A84FF files
Backend: data, services, routing	**5,328**	LOC · #30D158 files
Design system & localization	**796**	LOC · #BF5AF2 files
App infrastructure & state	**787**	LOC · #FFD60A files

Feature surfaces — screens by area

Within the 35,141 lines of feature screens, the biggest investments were Tasks and Focus.

Largest single files

settings/settings_screen.dart	**1,761**
tasks/tasks_screen.dart	**1,755**
settings/widget_preview_screen.dart	**1,738**
inbox/inbox_screen.dart	**1,305**
onboarding/onboard_screen.dart	**1,290**
focus/focus_screen.dart	**1,191**
tasks/edit_task_screen.dart	**1,019**
calendar/calendar_screen.dart	**983**
habits/habits_screen.dart	**977**
profile/profile_screen.dart	**939**

Recent session — polishing & bug-fixing

Qualitative summary of the most recent engagement (not time-tracked).

Theming	Fixed light/dark surface tokens (surf2/bdr0 across ~100 sites); per-theme wallpaper brightness; edit-profile black-tint fix.
Layout / nav	Central bottom-nav clearance so content/buttons stop hiding under the floating nav; Tasks list & 2×2 spacing.
Gestures / bugs	Checkmark tap no longer opens details (habits + tasks); dead-zone buffer around the checkmark; streak no longer wiped on un-check; skip now protects the streak.
Features wired	Onboarding answers persisted + goal → real task; 'Something came up?' skip card wired per-habit & globally; Tasks timer kept in Tasks tab.
Copy / polish	Removed fake ratings; Invite added before Sign-out; App Store → App Store/Play Store; Privacy/Terms split; contact details updated; photo & Gmail set to 'coming soon'.

Method & caveats

Effort here is approximated by **lines of hand-written Dart** per area — a rough proxy, not real time tracking (the project's git history is a single squashed commit, so per-commit effort over time can't be reconstructed). LOC under-counts dense work like the **localization** file (19 languages packed into long single lines) and visual/polish work (which often changes few lines for big effect).

* The 13,005 generated lines (Drift database.g.dart) are machine-produced from table definitions and are excluded from the effort totals — they represent <1 hour of schema authoring, not 13,005 lines of labour.

Kaal · Flutter cross-platform productivity app · report auto-generated from the working tree.
